Your Claude writes the quote. Kwote gets it accepted.

A quote-to-acceptance tool for freelancers and small agencies. It runs entirely on the customer's own Claude through MCP, and there is no AI inside Kwote.

THE PROBLEM

- Freelancers and small studios quote 5–30 times a month. Each quote takes 30–90 minutes in Word, Canva or WhatsApp.
- Prices drift from client to client, and GST and discount maths is done by hand, so errors creep in.
- Once the PDF is sent, they can't see it. Did the client open it? Do they want changes? Deals go cold in the gap.
- Claude can already write an excellent quote, but the draft is stuck in a chat window. It has no memory of your prices, nothing to send, and no way to track the result.

THE SOLUTION: CLAUDE DOES THE THINKING, KWOTE DOES EVERYTHING AFTER THE CHAT

1. In Claude: paste a client email or call notes. Claude reads the business's rate card, tax and terms from Kwote, then writes the scope, line items and timeline.

2. In Kwote: the quote appears on the dashboard. The owner edits any line, and Kwote calculates subtotal, discount, GST and total exactly.

3. With the client: one live link. The client accepts by typing their name, or requests changes. Every view and response is logged.

4. Back in Claude: Claude reads the client's feedback from Kwote and revises the quote, so the loop closes without copy-paste.

TARGET CUSTOMERS

Beachhead: Indian freelancers and 1–10 person agencies in design, web development, marketing, video and consulting who already pay for Claude. **Next:** global English-speaking freelancers on Upwork and Fiverr, then trades and B2B service SMBs. They already feel the pain, quote often, and every quote is tied directly to revenue.

BUSINESS MODEL AND PRICING

Plan	Price	Includes
Free	₹0	3 live quotes a month, Claude connector, client acceptance, "Sent with Kwote" footer
Pro	₹499/mo ($9)	Unlimited quotes, own branding, view alerts, follow-up reminders, PDF export
Studio	₹1,499/mo ($29)	5 seats, shared rate cards, pipeline reports

> **Unit economics:** AI cost is ₹0, because the customer's own Claude plan pays for the AI. Hosting and database come to about ₹4–8 per customer per month at 1,000 customers, plus about ₹10 in payment fees. That is about ₹15 to serve a ₹499 customer, for roughly 97% gross margin. Hosting costs are approximate estimates.

WHY IT WINS (AND WHY NOT "JUST CLAUDE")

- **Persistence and truth:** Kwote stores the rate card, terms and quote history, and does the arithmetic in code. Claude alone forgets your prices and can get the maths wrong.
- **A live link with tracking:** Claude can't host a page, record an acceptance or tell you a client opened the quote 3 hours ago.
- **Near-zero marginal cost:** no model bill means a free tier that is truly free, and margins competitors with in-app AI can't match.
- **Built-in distribution:** every quote is seen by a client, who is often a business that sends quotes too.

GROWTH PLAN AND POTENTIAL

First 100 customers (about 8 weeks): founder-led DMs to 300 freelancers with a 60-second "brief → quote → accepted" clip, free rate-card setup, posts in designer and developer communities and freelancer groups, "Claude for freelancers" tutorials, and the viral footer.

Horizon	Target	Product
Year 1	1,000 paying · about ₹60 lakh ARR	Quotes, reminders, branding, teams
Year 3	about 15,000 paying · about ₹10 crore ARR plus a payments take rate	Quote → invoice → UPI collection: every accepted rupee flows through Kwote, the receivables side of SMB money

LINKS AND TEST ACCESS

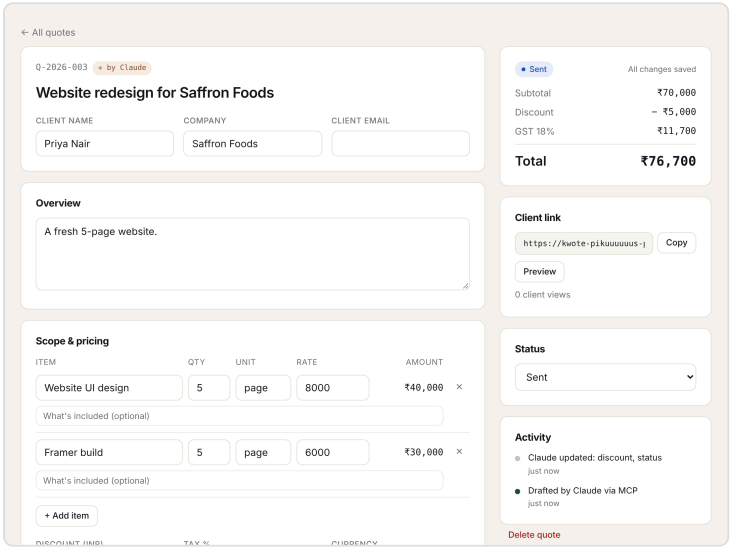

Live app	`https://kwote-pikuuuuuus-projects.vercel.app`
Test login	`demo@kwote.app` / `demo1234`
MCP link	`https://kwote-pikuuuuuus-projects.vercel.app/mcp/kw_demo_4QmZ8vT2xLp`
Connect to Claude	Claude → Settings → Connectors → **Add custom connector** → name "Kwote", paste the MCP link → Add (no sign-in). In a new chat, turn Kwote on and ask: *"Use Kwote to draft a quote for Priya at Saffron Foods: a logo and a 10-template Instagram kit in 3 weeks."*

CLAUDE INTEGRATION (MCP TOOLS)

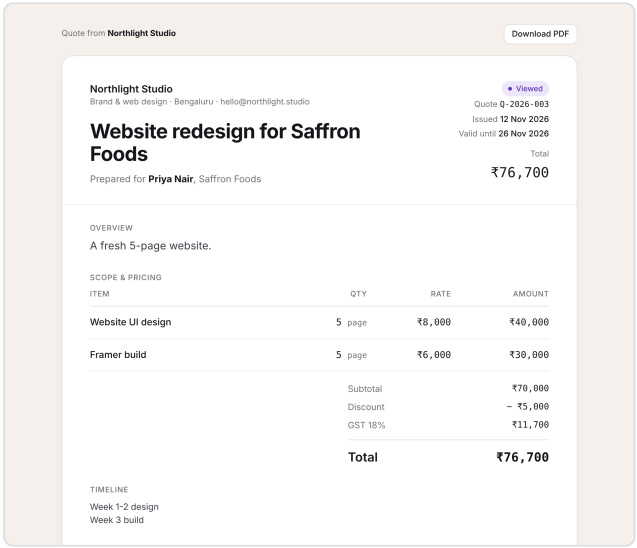

Tool	What it does
`get_business_profile`	Gives Claude the rate card, currency, GST and default terms, so every quote uses the real prices
`create_quote`	Saves a draft. Kwote calculates totals and returns the edit link and the client link
`list_quotes` / `get_quote`	Status, views, client feedback and activity history, for follow-ups and pipeline questions
`update_quote` / `update_business_profile`	Revise a quote after client feedback, or update rates and defaults

Architecture: Node.js and Express on Vercel, Postgres, and a stateless remote MCP server (Streamable HTTP). Each account gets a private MCP URL. **No OpenAI, Anthropic or other AI keys anywhere in the app.**

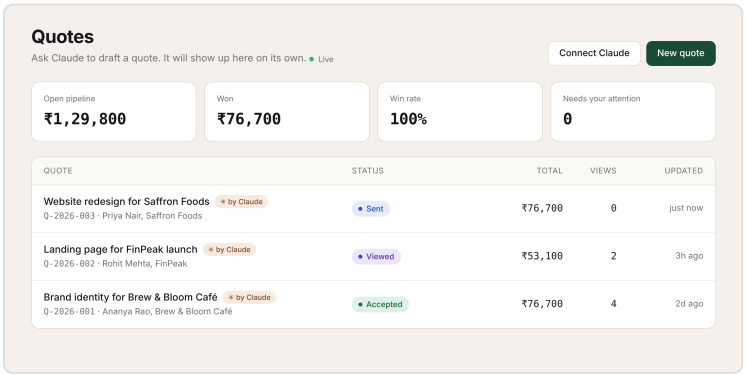

PRODUCT FUNCTIONALITY AND EDITING EXPERIENCE

Editor: a quote drafted by Claude (tagged "by Claude"). Line items, discount and GST are editable, totals recalculate live and autosave. On the right: client link, status, view count and activity log.

Client page: a branded live quote with one-click acceptance (typed name) or "Request changes". It also downloads as a PDF.

Dashboard: open pipeline, won value, win rate and quotes needing attention. Quotes created in Claude appear within about 4 seconds, with no refresh.

VERIFIED END TO END ON THE LIVE DEPLOYMENT

A Claude MCP call created a quote (₹30,000 + 18% GST = ₹35,400 computed by Kwote). The quote appeared on the dashboard, was edited in the app, opened from the client link (view counted), and was then accepted or sent back with change requests that Claude can read and revise.
